EDUCATION

University of Illinois Chicago (UIC)

Bachelor of Science in Computer Science

Expected Graduation: May 2026

Expected Honor: Cum Laude

- **Dean's List:** Spring 2024 – Fall 2025
- **Courses:** Algorithms, Computer Design, Data Structures, Languages & Automata, User Interface Design

TECHNICAL SKILLS

Programming Languages: C, C++, Python, Java, JavaScript, SQL, F#, HTML, CSS

Frameworks, Data & APIs: Flask, FastAPI, REST APIs, Pandas, Matplotlib, MySQL, MongoDB

AI, Tools & Systems: Large Language Models (LLMs), OpenAI APIs, Linux, Git, GitHub, GCC

EXPERIENCE

UIC College of Engineering

Jan 2025 – Present

Undergraduate Teaching Assistant (Computer Design)

Chicago, IL

- Lead hands-on lab sessions supporting **200+ students** debugging **C/C++ programs** and digital circuit designs
- Collaborate with course staff to simplify complex computer architecture concepts during weekly lab sessions
- Provide technical guidance for semester-long group projects and resolve implementation challenges effectively

UIC Campus Recreation and Wellbeing

Mar 2023 – Present

Building Manager

Chicago, IL

- Promoted to Building Manager within **6 months**, demonstrating strong leadership, reliability, and initiative
- Supervise daily facility operations and coordinate a team of **100+ staff members** to ensure smooth execution
- Lead shift transitions, delegate responsibilities, and resolve real-time issues to maintain efficiency and safety

Sumago Infotech Pvt. Ltd.

May 2020 – Jul 2020

Software Development Intern

Nashik, MH, India

- Worked as a software development intern contributing to real-world industry projects in a team environment
- Assisted in developing and maintaining application features using **C++** and backend technologies
- Collaborated with senior engineers to understand production workflows, debugging practices, and system design

PROJECTS

AgriMitra - AI-Powered Waste Management Platform (UIC Hackathon Winner)

Feb 2025

- Developed a full-stack web application using **Flask**, **React**, and **OpenAI APIs** for waste disposal decisions
- Integrated weather and location-based data to generate real-time, eco-friendly recommendations
- Implemented backend services with **MongoDB** to support chatbot interactions and data persistence

2-Player Networked Poker Game

Dec 2024

- Designed a real-time multiplayer Three Card Poker game using **Java Sockets** with a client-server architecture
- Built an interactive client interface using **JavaFX** and synchronized gameplay state across connected players
- Implemented server-side logic for game flow, dealer actions, and automated win evaluation

CTA Database Application

Feb 2024

- Created a command-line **Python** application integrated with **SQL** to analyze CTA ridership trends across stations
- Designed relational SQL queries across multiple tables to extract station-level and time-based insights
- Visualized ridership patterns using **Matplotlib** to support data-driven analysis and interpretation insights

Driving School Management System

Apr 2021

- Developed a full-stack web platform to digitize scheduling, payments, and user management for a driving school
- Built backend logic using **Python** and **SQL**, with a responsive frontend using **HTML**, **CSS**, and **JavaScript**
- Replaced manual paperwork workflows, significantly improving daily administrative efficiency
